# Danya Yudin

**Full-Stack & Systems Engineer** (TypeScript · Rust · Next.js · C/C++)

Saint Petersburg, Russia • sabraman@ya.ru • Telegram @sabraman • github.com/sabraman • sabraman.art/work

## PROFILE

Full-stack and systems engineer building high-craft user interfaces, developer tools, and low-level software. Experienced across **TypeScript, Rust, Next.js, C/C++, Swift, and Python**: from hardware & media internals (MIPS C++ on Sony PSP, C e-paper drivers, WebCodecs, BLE/SOAP reverse-engineering) to production web applications (Next.js, Telegram Mini Apps, open-source Tailwind plugins, DuckDB OLAP). Focused on performance, developer tooling, and offline-first product engineering.

## TECHNICAL SKILLS

| | |
|---|---|
| **Languages** | TypeScript, JavaScript, Rust, C++, C, Swift, Python, SQL |
| **Web & Interfaces** | Next.js, React, Tailwind CSS, custom Tailwind plugins, Motion, Radix UI, Canvas, Vite |
| **Systems & Hardware** | Rust (Frankenstein, Ureq, Rusqlite), C++ (SDL2, MIPS), C (E-paper / Embedded), Swift (macOS) |
| **Data & Backends** | Node.js, Bun, DuckDB (OLAP), PostgreSQL, SQLite, MS SQL, Redis, REST & SOAP APIs |
| **Tooling & Protocols** | WebCodecs, WebAssembly (Wasm), BLE Reverse Engineering, Telegram Mini Apps, Docker, Proxmox VE |

## WORK EXPERIENCE

**DAARIA TRANS** – Lead Systems Architect & IT Consultant | Murmansk / Saint Petersburg (Remote) 09/2026 -- 10/2026

- Reverse-engineered proprietary **TMS Logister** SOAP protocol ( 90 RPC endpoints) without disrupting live freight dispatches.
- Built automated email order ingestion pipeline, extracting transport parameters and cutting booking latency by 60%.
- Modeled combinatorial backhaul consolidation, achieving 4.9% freight procurement cost reduction on northern return legs.
- Architected high-availability **Proxmox VE** cluster hosting dispatcher VDI workstations provisioned via Golden Image in 15 minutes.
- Implemented 4-tier disaster recovery: 3-hour VSS snapshots, automated DB dumps, nightly vzdump images, and Vaultwarden.

**VAPARSHOP** – Full-Stack Developer & Product Designer | Saint Petersburg 06/2024 -- 03/2025

- Shipped **Telegram Mini App** on Next.js integrating GetMeBack loyalty API, QR verification, shift logging, and gamified staff onboarding.
- Built **Price Tag Printer** web tool with Excel/Google Sheets parsing, bulk editing, and instant print/PDF export for 1,000+ SKUs.
- Automated cash drawer reconciliation and shift handoffs via Telegram bots, eliminating manual managerial audits and safe variances.
- Developed an in-house Taplink CMS alternative in **Next.js** with dynamic blogs, interactive retail map widgets, and SEO optimization.

**HORNY PLACE** – Visual Designer & Frontend Developer | Saint Petersburg 10/2022 -- 05/2024

- Engineered high-conversion event landing page on **Next.js** with seamless **Ticketscloud** ticketing widget integration.
- Designed comprehensive retail brand system and guidelines covering digital UI, offline touchpoints, and print collateral.
- Built reusable modular component library in Figma translated directly into clean CSS/Tailwind frontend primitives.

## SELECTED PROJECTS

- **Kwork Parser & Pinterest Bot** (Rust, Frankenstein, SQLite) – Memory-efficient event monitors and Telegram forwarders optimized for minimal VPS memory footprints.
- **PSP Video Web** (TypeScript, WebCodecs, MediaBunny) – In-browser hardware video transcode pipeline with WebCodecs, USB auto-detection, and Sony PSP storage management.
- **PSP Book Reader** (C++, SDL2, MIPS Optimization) – Native EPUB/TXT reader engineered for Sony PlayStation Portable hardware with dual-stage caching and battery optimization.
- **Spritefusion Pixel Snapper** (Rust, Image Processing, Wasm) – Open-source Rust CLI and library for pixel art quantization and palette mapping with k-means color clustering.
- **SleepOff** (Swift, macOS) – Native macOS menu bar application managing system sleep states with display dimming when laptop lid is closed.
- **Tailwindcss-Rounbit** (TypeScript, Tailwind Plugin API) – Open-source Tailwind CSS plugin generating authentic pixel-art rounded corners for retro interfaces.
- **Price Tag Printer** (Next.js, TypeScript, Canvas, Print CSS) – Open-source price tag generator parsing messy spreadsheet tables with custom template rendering and PDF generation.
